

VINITKUMAR PRAJAPATI

Product Manager | Project Manager | Business Analyst

vinitoza1702@gmail.com | +91-98984-71702 | Ahmedabad, Gujarat, India

<https://www.linkedin.com/in/vinitkumar-prajapati/> | <https://vinit-oza.github.io/Portfolio/>

PROFESSIONAL SUMMARY

Aspiring AI Product Manager with a B.Tech in CSE (Big Data Analytics), hands-on experience in AI/ML data pipelines, and certifications from IBM and Microsoft. Skilled in product roadmap thinking, Agile methodologies, stakeholder management, KPI tracking, and data-driven decision making. Proven ability to manage cross-functional collaboration, define MVPs, prioritize product backlogs, and translate technical findings into actionable business insights.

CORE SKILLS & COMPETENCIES

Product Management: Technical PRD, API Contract Design, 0-to-1 Feature Definition, Product Roadmap, MVP, Backlog Prioritization, GTM Strategy, User Research, VoC, Competitive Analysis, KPI/OKR, A/B Testing, Release Planning, Technical Feasibility Assessment.

Agile & Methodology: Scrum, Sprint Planning, Sprint Review, MoSCoW, RICE, Acceptance Criteria, Iterative Development, Continuous Feedback Loops

AI / LLM Domain: Prompt Engineering, Context-Window Design, LLM API Integration (GPT, Gemini, Claude API), AI Agents, Workflow Automation, Generative AI, Computer Vision, , Data Pipeline, Feature Engineering, Bias Mitigation, Precision/Recall/F1-Score, ROC-AUC

Data & Tools: Python (Pandas), SQL, REST API, AWS/GCP (Basics), GitHub, Power BI, Tableau, Excel, CVAT, Roboflow, Jupyter Notebooks, Kaggle

PROFESSIONAL EXPERIENCE

Generative AI Engineer & Project Manager • Freelance – Independent Contractor

• Mar 2025 – Present

Lead a 5-person cross-functional team that has shipped 10+ client projects spanning full-stack web development, LLM integration (GPT-4, Gemini, Claude API), AI agent orchestration, and end-to-end workflow automation.

- Build production-ready, responsive web applications using Vibe Coding and AI-native development environments (Cursor, Claude), reducing prototype-to-delivery cycles by ~40%.
- Own technical product definition per engagement: author API contracts, review data models, assess technical feasibility, and translate client goals into engineering tasks (database schemas, REST/GraphQL endpoints, background jobs).
- Manage end-to-end client lifecycle — requirement gathering, iterative feedback loops, sprint-style delivery, and post-launch QA — ensuring clear expectations and on-time project completion.

AI Data Quality & Annotation Specialist • Pixel Annotation • Ahmedabad

• 01/2026 – Present

- Acted as sole Project Lead on 3 AI/ML annotation projects, owning the full delivery lifecycle from kickoff to final QA sign-off with zero missed deadlines.
- Managed AI/ML training data quality roadmap for 50,000+ structured and unstructured data points at 98%+ accuracy, directly improving downstream model precision, recall, and F1-score KPIs.
- Led cross-functional sprint-style reviews with labeling teams and ML engineers, resolving 200+ edge-case annotation issues and establishing acceptance criteria that reduced data ambiguity by ~30%.
- Optimised CVAT and Roboflow annotation workflows using prioritisation frameworks, reducing rework cycles by ~25% and improving team throughput — core AI Product Manager responsibilities in data pipeline management.

PROJECTS — PM CASE STUDIES

1. Airbnb Product Case Study

- Analysed Airbnb's growth from startup to \$100B+ marketplace using product management frameworks and hypothesis-driven development.
- Identified key friction points (trust, payment, photo quality) and mapped product solutions that improved booking conversion by 2–3x.
- Designed AI feature roadmap: Smart Pricing, personalised search ranking, and real-time fraud detection, sequenced as human validation → scalable systems → AI optimisation.
- Evaluated two-sided marketplace dynamics, trust infrastructure, and their impact on user retention (>50% repeat bookings).
- Produced prioritised product backlog with acceptance criteria; documented technical specs covering API endpoints and data-model changes.

2. Uber Eats Product Strategy Case Study

- Analysed Uber Eats' market position vs DoorDash, identifying key gaps in delivery speed, driver trust, and ecosystem leverage through competitive analysis and VoC synthesis.
- Proposed 'Driver Fairness Shield' — AI-based earnings-prediction model to improve driver retention by addressing tip-baiting and earnings transparency.
- Designed 'Perfect Timing Engine' using predictive analytics to optimise dispatch timing and reduce delivery time from ~38 to ~30 minutes.
- Developed 'One App for Everything' strategy leveraging Uber's ecosystem to increase cross-platform engagement and customer lifetime value.
- Estimated \$10B+ annual revenue impact; documented technical PRD covering database migrations, background jobs, and REST API endpoints.

CERTIFICATIONS

AI Product Manager

Microsoft | 2026

Agile Project Management

Google | 2025

Databases & SQL for Data Science with Python

IBM | 2025

EDUCATION

B.Tech — Computer Science Engineering (Big Data Analytics)

Parul University PIET, Vadodara, Gujarat • 2022 – 2026
